(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pMP42 (gil4732114/gblAR129072.1), a copy number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared adaptored mouse DNA was annealed to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Email: msoares@blue.weeg.ulowa.edu

polyllnker; Site_1: Not I; Site_2: Eco RI; The UI-R-AFI
library is a normalized library constructed from 15 dpc
rat atrioventricular (AV) canal. The tag is a string of 5
nucleotides present between the Not I site and the
oligo-dT track. The library was constructed as described
by Bonaldo, Lennon and Soares, Genome Research 6: 791-806
/ 1996. Tissue provided by Jim Lin, Department of Biology,
UNIVERSITY of Iowa.

/note-"Organ: Kidney/Brain; Vector: pBACe3.6; Site_1:
ECORI; Site_2: ECORI; Female C57BL/6J mouse kidney and/or
brain genomic DNA was isolated and partially digested
with a combination of EcoRI and EcoRI methylase. Size
selected DNA was cloned into the pBACe3.6 vector at the
ECORI sites. The ligation products were transformed into
DH10B electrocompetent cells (BRL Life Technologies).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ΩX
                                      Sequences encoding canine interleurs 11-13 clones 80
and 78 respectively. The invention relates to canine
11-4, canine or feline Flt-3 ligand, canine or feline
11-4, canine or feline Flt-3 ligand, canine IL-3, canine CD40, canine or
feline CD154 (CD40 ligand), canine IL-5, canine IL-13, feline
interferon-alpha (IFN-alpha) and feline granulocyte macrophage
colony-stimulating factor (GMCSF), and nucleotides which encode these
immunoregulatory proteins. The proteins associated
colony-stimulatory proteins. The proteins and inhibitors may be used as
nucleic acids, specific antibodies and inhibitors may be used as
concerned for interapeutic or prophylactic regulation of an immune
response in animals (particularly cats, dogs, horses and humans).
They may be used to treat autoimmune or infectious diseases including
alleries, tumours, inflammation and graft rejection, and to increase
the response from a co-administered antigen. The nucleotide sequences
can also be used for the recombinant production of a protein, while
nucleotide fragments are useful as probes, as amplification primers and
as sources of inhibitory therapeutics (e.g., antisenses oligonucleotides).
The proteins may be used to raise antibodies and to screen for
modulators of activity, while the antibodies may be used in detection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;

sequences encoding cannon interleukin-13 (II-13) clones 80
and 78 respectively. The invention relates to canine
CC thick, canine or felline Fit-3 ligand, canine or felline CD154 (CD40 ligand), canine IL-3, canine IL-13, felline
interferon-alpha (IFN-alpha) and felline granulocyte macrophage
colony-stimulating factor (GMCSF), and nucleotides which encode these
colony-stimulating factor (GMCSF), and nucleotides which encode these
colony-stimulating factor (PMCSF), and nucleotides which encode these
colony-stimulating factor (PMCSF), and nucleotides which encode these
colony-stimulating factor (PMCSF), and inhibitors may be used as
colony-stimulating factor prophylactic requiation of an immune
response in animals (particularly cats, dogs, horses and humans).
They may be used to treat autoimmune or infectious diseases including
allergies, tumours, inflammation and graft rejection, and to increase
the response from a co-administered antigen. The nucleotide sequences
can also be used for the recombinant production of a protein, while
nucleotide fragments are useful as probes, as amplification primers and
as sources of inhibitory therapeutics (e.g., antisense oligonucleotides).
The proteins may be used to raise antibodies and to screen for
condulators of activity, while the antibodies may be used in detection,

                                                                                                                                                                                                                                                                                                                                                 Sequences encoding canine interleukin-13 (IL-13) clones 80
and 78 respectively. The invention relates to canine
IL-4, canine or feline Flt-3 ligand, canine or feline CD40, canine or
feline CD154 (CD40 ligand), canine IL-5, canine IL-13, feline
interferon-alpha (IEN-alpha) and feline granulocyte macrophage
colony-stimulating factor (GMCSF), and nucleotides which encode these
immunoregulatory proteins. The proteins, their associated
immunoregulatory proteins. The prophlactic regulation of an immune
colony-stemplation proteins and inhibitors may be used as
uncleic acids, specific antibodies and inhibitors may be used as
concessions for inflammation and graft rejection, and to increase
they may be used to treat autoimmune or infectious diseases including
the response from a co-administered antigon. The nucleotide sequences
can also be used for the recombinant production of a protein, while
concession inhibitory therapeutics (e.g., antisense oligonucleotides).
The proteins may be used to raise antibodies and to screen for
concession and activity, while the antibodies may be used in detection,
concession and activity, while the antibodies may be used in detection,

```
sequences encoding canine interleuking Int-13) clones 80
and 78 respectively. The invention relates to canine
IL-4, canine or feline Fit-3 ligand, canine IL-13, feline
IL-4, canine or feline Fit-3 ligand, canine IL-13, feline
interferon-alpha (IRN-alpha) and feline granulocyte macrophage
colony-stimulating factor (GMCSF), and nucleotides which encode these
immunoregulatory proteins. The proteins, their associated
nucleic acids, specific antibodies and inhibitors may be used as
nucleic acids, specific antibodies and inhibitors may be used as
vaccines for therapeutic or prophylactic regulation of an immune
response in animals (particularly cats, dogs, horses and humans).
They may be used to treat autoimmune or infectious diseases including
allergies, tumours, inflammation and graft rejection, and to increase
the response from a co-administered antigen. The nucleotide sequences
can also be used for the recombinant production of a protein, while
nucleotide fragments are useful as probes, as amplification primers and
as sources of inhibitory therapeutics (e.g., antisense oligonucleotides).
The proteins may be used to raise antibodies and to screen for
andulators of activity, while the antibodies may be used in detection,
                                            Canine interleukin-13 (IL-13) clone 78 cDNA coding region complement.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Interleukin-13; IL-13; antibody; canine; inhibitor; immune response;

                                    vaccines for therapeutic or prophylactic regulation of an immune response in animals (particularly cats, dogs, horses and humans). They may be used to treat autoimmune or infectious diseases including allergies, tumours, inflammation and graft rejection, and to increase the response from a co-administered antigen. The nucleotide sequences can also be used for the recombinant production of a protein, while nucleotide fragments are useful as probes, as amplification primers and as sources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection,

and 78 respectively. The invention relates to canine and 78 respectively. The invention relates to canine and 78 respectively. The invention relates to canine CL-4, canine or felline Fit-3 ligand, canine IL-13, felline cor felline Fit-3 ligand, canine IL-13, felline cor felline Fit-3 ligand, canine IL-5, canine IL-13, felline interferon-alpha (IFN-alpha) and felline granulocyte macrophage colony stimulating factor (GMCSF), and nuclectides which encode these immunoregulatory proteins. The proteins their associated nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune response in animals (particularly cats, dogs, horses and humans). They may be used to treat autoimmune or infectious diseases including response from a co-administered antigen. The nucleotide sequences can also be used for the recombinant production of a protein, while nucleotide fragments are useful as probes, as amplification primers and as sources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection, and in detection, and in the constitution of a constitu Ϊ; cagaatcaggcatccctctgcaacggcagcatggtgtggaagcgtcaacctgaccgccggc 120 180 237 Gaps 9 Nucleic acids encoding immunoregulatory proteins from cats or dogs, useful for treating or preventing e.g. tumors or autoimmune disease 1 agccctgtgactccctccccaaccctcaaggagctcattgaggagctggtcaacatcacc acccagaggatgctgaaagcactgtgctctcaaaagcccgcggcagg---gatttccagt acccagaggatgctgaaagcactgtgctctcaaaagcccgcggggagggcagatttccagt 96.1%; Score 317; DB 21; Length 333; 99.1%; Pred. The invention relates to canine IL-4, canine or feline Fit-3 ligand, canine or feline CD154 (CD40 ligand), canine IL-5, canine IL-13, feline interferon-alpha (IRN-alpha) and feline granulocyte macrophage colony-stimulating factor (GMCSF), and nucleotides which encode these immunoregulatory proteins. The proteins, their associated nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune response in animals (particularly cats, dogs, horses and humans). They may be used to treat autoimmune or infectious diseases including

sequences 25552-25560 and 25561-25566 represent.cDNA
sequences encoding canine interleukin-13 (IL-13) clones 80
and 78 respectively. The invention relates to canine
CE IL-4, canine or feline Flt-3 ligand, canine or feline CD40, canine or
feline CD154 (CD40 ligand), canine IL-5, canine IL-13, feline
CE IL-4 canine or feline Flt-3 ligand, canine or feline CD40, canine or
colony-stimulating factor (GMCSF), and nucleotides which encode these
immunoregulatory proteins. The proteins, their associated
colony-stimulating factor (GMCSF), and nucleotides which encode these
immunoregulatory proteins. The proteins, their associated
nucleic acids, specific antibodies and inhibitors may be used as
vaccines for therapeutic or prophylactic regulation of an immune
response in animals (particularly cats, dogs, horses and humans).
They may be used to treat autoimmune or infectious diseases including
allergies, tumours, inflammation and graft rejection, and to increase
the response from a co-administered antigen. The nucleotide sequences
can also be used for the recombinant production of a protein, while

Sequences encoding canine interior (11.13) clones 80
and 78 respectively. The invention relates to canine
L1-4, canine or felline Flt-1 sligand, canine or felline CD40, canine or
felline CD154 (CD40 ligand), canine L1-3, felline
interferon-alpha (IFN-alpha) and felline granulocyte macrophage
colony stimulating factor (GMCSF), and nuclectides which encode these
immunoregulatory proteins. The proteins, their associated
nucleic acids, specific antibodies and inhibitors may be used as
vaccines for therapeutic or prophylactic regulation of an immune
response in animals (particularly cats, dogs, horses and humans).
They may be used to treat autoimmune or infectious diseases including
allerities, fundours, inflammation and graft rejection, and to increase
the response from a co-administered antigen. The nucleotide sequences
can also be used for the recombinant production of a protein, while
nucleotide fragments are useful as probes, as amplification primers and
as sources of inhibitory therapeutics (e.g., antisense oligonucleotides)
The proteins may be used to raise antibodies and to screen for
modulators of activity, while the antibodies may be used in detection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180
